-Laravel, Node.js(Express.js), Entity framework.

Database
-Mysql, Mongodb.

English
-English certificate B2.

Hobbies

-Playing football
-Socializing with people
-Watching movies

Career goals

My career goal is to create significant value for the company within one year through my efforts and potentially become a mid-level developer. Afterward, I aim to continue striving for the next three years to become a senior developer. Ultimately, I aspire to become a project manager for a large-scale project.

Education

Greenwich University   *26/9/2021 - 25/10/2025*

Information technology

4th year student

Work experience

Full-time at Rabiloo company   *03/02/2024 - 11/2/2025*

FullStack web developer fresher laravel with vue.js position

The experiences I have gained :
-Complex queries, Broadcasting, Event, Helpers, Queues, Task Scheduling, Horizon, et cetera.
-Code organization with Service-Repository Pattern.
-Read and practice full document vue.js and Inertia.js.
-A business operation and communication skills with colleagues.
-Problem solving and time management skills.

Fresher fullstack   *3/03/2024 - 7/7/2024*

Rabiloo company

Project Name: Coworking Project
Team Size: 7 members
Objective: Developed a robust platform designed to facilitate the purchase of coworking space packages, catering to a diverse range of users and business needs.
Key Contributions: Backend Development (Laravel):
-Designed and implemented a secure and scalable login and authentication system, ensuring smooth user onboarding and data protection.
-Integrated multi-language support to make the platform accessible to users from different regions, enhancing its global appeal.
-Developed and configured push notification services, enabling real-time updates and improving user engagement.
-Built a seamless Stripe payment gateway integration, handling transactions securely and efficiently while providing detailed transaction tracking and error handling.
Frontend Development (Vue.js):
Architected and developed a full-featured admin dashboard using Vue.js, providing administrators with intuitive tools to manage coworking packages, monitor user activity, and generate reports.

Fresher fullstack   *15/7/2024 - 18/08/2025*

Rabiloo company

Project Name: Nuclear Management
Team Size: 5 members
Objective: Developed a comprehensive system for managing nuclear facility operations, tailored to meet the requirements of a Japanese client.
Key Contribution:
API Development:
Designed and implemented a full suite of RESTful APIs to support core functionalities of the system, ensuring scalability, security, and performance.

Focused on delivering well-documented APIs that adhered to industry standards and facilitated seamless integration with frontend systems.
Optimized API endpoints to handle large-scale data processing, ensuring reliability under high-load scenarios.

Intern at Imtatech company   *5/5/2023 - 10/11/2023*

FullStack web developer internship laravel with vue.js position

The experiences I have gained :
-Read and practice full document laravel
-Writing Swagger documents.
-Authentication with Sanctum API.
-Authorization with Gate and Policy.
-Multiple language translation.
-CRUD operations with a text editor.
-Uploading multiple images.
-Design patterns.
-Writing clean code and following SOLID principles.

Honors and awards
