"

Within the next 3 years, I hope to achieve the following goals:
– Accumulate at least 3 years of working experience in the field of developing AI systems.
– Develop into a AI expert, with the ability to develop advanced, highly accurate AI models.

Work experience

September 2024 – Now
AI Developer
AI VIETNAM - BITECH.,JSC

Main responsibilities:
- Propose and deploy large language models and new AI technology for E-learning, information processing and bringing new AI technology to users.
- Manage communication between back-end services and AI services with Amazon EC2.
- Ensure the performance of AI services for a large number of users.
- Connect to services from leading AI companies such as OpenAI, Google, Azure...
- Collaborate with departments within the company to bring new AI technologies to businesses and customers.

February 2024 – August 2024
AI Engineer
VIK SOLUTION CO., LTD

Main responsibilities:
- Propose, deploy large language model and new AI technology to replace old chatbot systems, resulting improve chatbot information processing capabilities and optimize user experience.

Education

HANOI UNIVERSITY OF MINING AND GEOLOGY
| **2021 – Now**

MAJOR: INFOMATION SYSTEM

GPA: 3.15/4

Skills

Technical
- Python
- Docker
- Github
- AWS
- Firebase
- FastAPI
- Azure AI
- Machine Learning and Deep Learning Libraries: Pytorch, Sckitlearn...
- Fast AI Development Library: Transformers, Langchain...

Certifications

April 2024

The Informatics Olympic competition at the Hanoi University of Mining and Geology

- Build API, deploy to server to be able to communicate with website back-end development team.
- Collect data from conversations between the old chatbot system and customers, process the collected data and use it as input data for the new RAG system.
- Collaborate with the business team to build chatbot data sets corresponding to each specific industry for each customer.
- Search and use public models to build support tools for customers such as: virtual try-on, audio-to-text, OCR for bills, GAN....

December 2023 - February 2024

Freelance programmer

Project: Develop bridge vibration monitoring system

Main responsibilities:
- Embedded programming of IoT devices to measure acceleration, WiFi connection and distance for building a bridge vibration warning system.
- Process raw data, upload processed data to Firebase. Use Matplotlib and FastAPI on the server to draw charts and return data via API.

Activities

August 2023 - February 2024

Teaching assistant for Python programming

Major in Information Systems, Hanoi University of Mining and Geology

Search for sample programming exercises, guide students in programming and answer students' questions related to the subject.

Jun 2024

Da Nang Code League 2024

March 2025

TOEIC 500
