Nguyen Kien

Backend Developer

kiennd.dev@gmail.com — 0967409906 — github.com/Kein-ndk/

Hanoi, Vietnam

Professional Summary

Backend Developer with 2 years of experience in system development, specializing in **PHP (Laravel, Magento 2)**. Proven experience in full-cycle software development following **Agile/Scrum** methodology. Strong understanding of **RESTful API design, database optimization, Docker, and Linux environments**. Skilled in deployment, maintenance, **bug fixing**, and internal system integration. Adaptable, proactive, and committed to product quality, eager to contribute to internal management and operation software development.

Core Skills

Programming: PHP (Proficient), JavaScript (ES6+), basic Java
Frameworks: Laravel, Magento 2, familiar with Spring Boot concepts
Database: MySQL, query optimization, database design
Backend: RESTful API, modular architecture, caching, microservice principles, **System Integration**
Tools & Environment: Docker, Linux (Ubuntu), **Git (Proficient)**, Postman, Trello

Work Experience

Backend Developer (Magento)

Avada Group   Feb 2023 – May 2025

- Developed and upgraded custom backend modules on Magento 2 for enterprise e-commerce systems.

- Designed and implemented **REST APIs**, optimized SQL queries, and established modular backend architecture.

- Deployed and operated in **Linux/Docker environments**, ensuring consistency across development stages.

- Closely collaborated with **BA and QA teams** within the **Agile/Scrum** framework for requirement analysis, **internal testing**, and on-schedule feature delivery.

- **Handled production bugs**, performed system **maintenance**, and upgraded features as required, ensuring system stability and scalability.

- **Wrote technical documentation** for internal APIs and **managed inter-system integration** with third-party services (payment, shipping).

Tech Stack: PHP, Laravel, Magento 2, MySQL, Docker, Linux, Git, Trello

Projects

Golden Hour – E-commerce Website (Personal Project)
Developed a complete online watch store using **PHP + MySQL**, including authentication, product management, and order tracking. Applied **modular backend design and RESTful architecture** to ensure stability and scalability.
GitHub: github.com/Kein-ndk/golden_hour_php
Tech Stack: PHP, MySQL, HTML, CSS, JavaScript, Docker

Magento Module Development (Company Projects)
Customized and extended Magento 2 backend modules for multiple client systems. Improved performance and maintainability through **refactoring and caching strategies**.
Tech Stack: PHP, Magento 2, MySQL, Docker, Git, Trello

Education

Engineer of Computer Science
Hanoi University of Civil Engineering
09/2019 – 03/2024

Certificates

Engineer of Computer Science – Hanoi University of Civil Engineering
Full Stack PHP Developer – IT-PLUS Center

Languages

English (Intermediate, able to read and write technical documentation)
